

SECTION 10

10.01 GENERAL:

All Conduits which will become part of Denver Water system will be designed and built by Denver Water. In cases where Denver Water determines that the Conduit will not be part of its system, Denver Water may allow a Distributor to design and/or install Conduits; however, Denver Water must approve the design and installation of these Conduits to insure that sound engineering and construction procedures are followed within the context of 2.08. The intent of this Chapter is to state the additional design requirements for Conduits and should not be construed as permission to design and install Conduits.

Design of the Conduit should proceed only after approval to design and/or construct the Conduit is received from Denver Water. The overall plan, size, location, and any other pertinent details shall be reviewed by Denver Water prior to the submittal of plans and specifications required by 10.05.

The Distributor shall pay all costs in the design and construction of Conduits including those incurred by Denver Water for inspection, testing of materials, and other Denver Water services.
